Review #2: Cang Le

This review is going to be on Cang Le's Project 1. I liked the feel that he gave us with his office. It was a very relaxing environment. He added cool things like sounds that triggered when getting close to certain objects/areas.

The first image I have here shows a TV entertainment area where the TV is playing a video. I thought it was interesting seeing that Cang implemented a video to be played on this TV. When first starting the project, you instantly hear a voice talking. At first I thought it was just supposed to be an emulation of people in the office talking to each other. Upon moving throughout the office, I realized that the TV actually was playing a VSauce video. I found it cool that instead of having a blank TV he had a video playing from it.

In this next picture, I show objects that Cang created. I found it cool that he made somewhat complex objects for his project. I personally found it hard to make complex shapes when using SketchUp. It was my first time using the program so I'm sure once I get more time working with it I would be able to create objects like the ones above. I appreciate these objects because I'm sure he put in a lot of time and effort into creating them.

In this picture above, I show a fireplace Cang implemented into his office. I wanted to show these because he added a sound to it. When coming to a certain distance near the fireplace, you begin to hear sounds of crackling fire. I thought it was awesome adding the crackling fire sound since it adds a factor to deepen the user's immersion.

The last picture I'm showing is of an arcade area he added into his office. I thought this was pretty awesome since I myself enjoy video games a whole lot. The reason I wanted to show this area off though was because once you move close to this area a song is played. It is also a song I personally have enjoyed listening to in the past. This song is “Lucky by Jason Mraz & Colbie Caillat”.

To conclude this review, Cang used a lot of cool objects and created some cool ones too. He also implemented a lot of cool sounds that made I thought immersed me deeper like the TV and the fireplace. He definitely put a lot of time and effort into creating this office.
